Step 1 - Remove battery

To start dismantling, we will have to remove the battery. To do this, we press the extraction button and pull it.

Step 2 - Remove position control module

Remove the two hexagonal head screws (1,5) that hold the module and remove it.

Step 3 - Remove housing

We take out the four hexagonal screws (1,5) and undo them. Then we remove the two hexagonal screws (1,5) that hold the height sensor and extract it.

Step 4 - Height and position control plate

We remove the control chamber and desoldamos the ultrasonic sensor.
