3,07 €

Set of professional
tools for opening
smartphones and
tablets

18,97 €

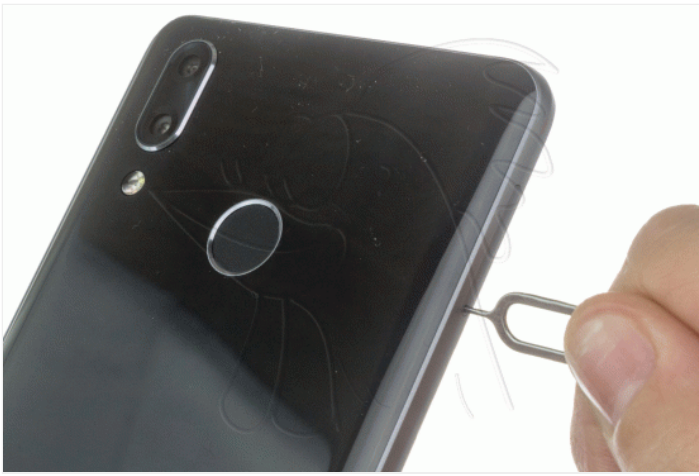

Special SAT 0.75mm
high friction PVC pick

1,07 €

Step 1 - SIM tray

With a SIM extraction tool we remove the SIM tray.

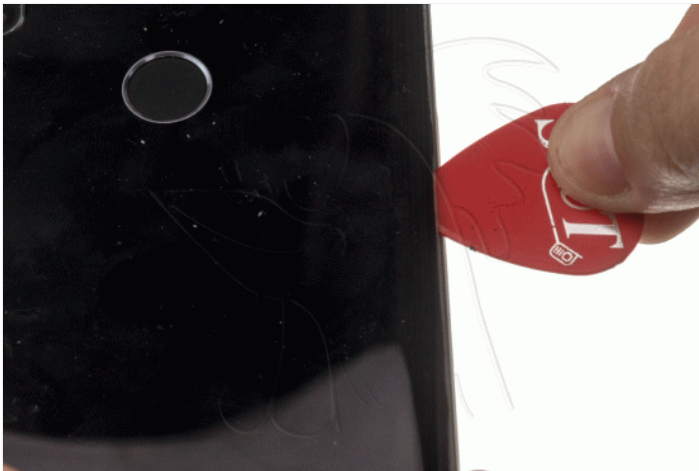

Step 2 - Back case

We heat the mobile at 80 degrees for 2 minutes to soften the adhesive that holds the back cover.

We will introduce a metal pick inside the rear case. We will replace it with a plastic one so as not to scratch the case. We will do all the contour taking off the back cover to take it off.

Step 3 - Protective sheet

Unscrew the Phillips screws (PH # 00) that hold the protective metal sheet. We remove the plate, disconnect the flex from the fingerprint reader and remove everything.

Step 4 - Speaker

Unscrew the Phillips screws (PH # 00) that hold the speaker. We removed it.
